## Microsoft Outlook For Mac 15.35 (170610) Attachments

Create Calendar Events from Emails and Tasks Outlook Calendar events can now be created by simply dragging and dropping an email or task directly onto the calendar.. The email's subject becomes the calendar event's name, and the email's body text is automatically added to the event's notes field.. So, it's nice to see this feature come to Outlook 2016 for Mac, but don't rely on it in all circumstances.. It's a quick and easy way to add emailed project info to your calendar, or as a way to set aside time on your schedule to address an important or complicated email.. Delivery and read receipts are available to all Office 365 subscribers today running version 15.. 35, build 170610 and up Email Templates Users can now create, which makes it much faster to send multiple emails that contain the same information.. Interested in creating video tutorials to teach others how to use software? Or perhaps you need to communicate a computer problem you're experiencing.. The templates can also be modified on a per-email basis, so you can always add or remove saved content depending on the email, and they can be exported to share with others in your business or team.

Again, not all email accounts and services support these features, and in many cases the recipient can choose not to respond to a receipt request.. The difference is that a delivery receipt confirms only that the email successfully made it to the recipients account, while the read receipt confirms that the email was actually opened by the recipient.. Good news for Outlook users: Microsoft this week announced that it is adding several of its customers' "most requested features" to Outlook 2016 for Mac.. Free video capture software is very useful for capturing high-quality video that you performed on your device like computer, mobile phone or tablet CamStudio is one of the best free video captures to record screen objects and create them in AVI format.. 36, build 170606) and will be rolled out to all users next month Delivery and Read Receipts For email accounts and services that support it, Outlook 2016 for Mac now lets users delivery and read receipts for sent emails.. 35, build 170610 and up
